

An absolutely innovative tendon boot characterized by a perfectly anatomical shape that guarantees the maximum comfort and perfect positioning on the horse's limb.

An **EVA FOAM** pad inserted in the shell provides maximum **protection for the flexor tendon**, an area at particular risk of injury and bruising.

A quick closure, adjustable with elastic straps, makes the **"OLYMPUS"** tendon boot extremely practical to put on and remove.

Size:	S - M - L
Colour:	■ black ■ brown
Product Code:	OLYF (Front)

- **Anatomically-shaped shell**

The shape of the upper and lower shell provides greater freedom of movement at the knee and fetlock. Its anatomical shape guarantees the maximum comfort and perfect positioning on the horse's limb.

- **Double density**

The shell consists of **two distinct parts** with different density and rigidity:

The main shell, in **54-SHORE TPU**, a flexible and extremely strong polyurethane mixture, provides excellent protection against abrasion, deterioration and the multiple stresses caused by the activities of sport horses.

The **54-SHORE TPU** maintains its elasto-mechanical properties from -15 °C to +50 °C without variations of **rigidity and flexibility**.

In the back of the tendon boot, corresponding to the flexor tendon, extra protection is provided by an "X" made of **66-SHORE TPU**, a more rigid, protective polyurethane mixture containing the **EVA FOAM section**. The two parts are combined during injection in the mould.

- **Flexor tendon protection in EVA FOAM**

The rear 66-SHORE TPU "X" with an EVA FOAM insert provides effective protection of the flexor tendon against any type of shock and bruising.

- **Elastic straps**

Soft, **adjustable** elastic straps provide perfect closure on all "sizes" of shin, eliminating all problems caused by too tight a fit or excessive pressure.

The special elastomers used in the straps maintain constant tension over time and don't change their elasticity when wet.

- **Quick-release tip**

Undeformable FLEXTAN tips on a stainless steel clasp allow extremely **fast** hooking and unhooking, **even with just one hand**.

The closure holes have a narrowing that guarantees a **secure hold**, avoiding the possibility of **accidental unhooking** during work or competition.

Unlike leather straps whose holes become deformed after a few applications, compromising their functionality and reliability, straps with **BLACK VEREDUS LINE** tips are guaranteed and tested for 5,000 hooking/unhooking cycles without undergoing any variation.

Unlike Velcro straps, which lose their hold over time and become less reliable, straps with **BLACK VEREDUS LINE** tips are not subject to wear and provide the maximum security and reliability.

- **Certified Protection**

Protection **tested** and **certified** by RCT Rico TEST.
